Growth Hacking

“Growth hackers are a hybrid of marketer and coder, one who looks at the traditional question of ‘How do I get customers for my product?’ and answers with [A/B tests](#), landing pages, viral factor, email deliverability, and Open Graph. On top of this, they layer the discipline of direct marketing, with its emphasis on [quantitative measurement](#), [scenario modeling](#) via spreadsheets, and a lot of [database queries](#). If a startup is [pre-product/market fit](#), growth hackers can make sure virality is embedded at the core of a product. [After product/market fit](#), they can help run up the score on what’s already working.”

- 《Growth Hacker is the new VP Marketing》, Andrew Chen

A/B Testing

- Statistical hypothesis testing
- Essential of sampling - Traffic
- Benefits
 - Quick fail!
 - Customer vs. expertise
 - Early adoption in the marketing
 - Continue delivery and integration
 - Data driven decision

Growth Hacking & Marketing

- “Poor **distribution** — not product — is the number one cause of failure” — Peter Thiel, 《Zero to One》
- Distribution Channels (《Growth Hacking 是运气还是科学？》)
 - Viral marketing + Social Network
 - **Advertising (digital/internet marketing)**
 - UGC + SEO
 - Email
 - Affiliate Net
- What’s the most challenge of A/B testing in Marketing?

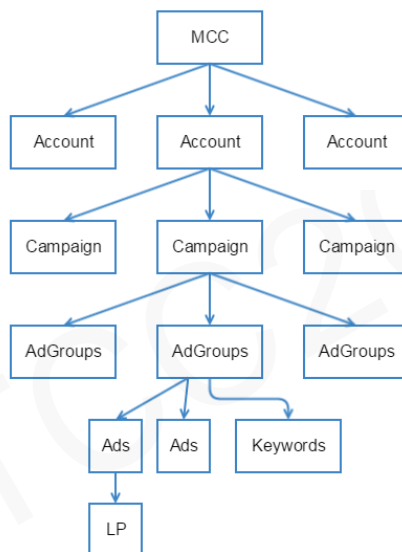

Challenges of A/B testing in the Paid Search Ads

- Traffic Allocation/Sampling
 - No control on the user/visiting
 - Could not sample based on the user
 - Alternative sampling: skewed data
- Test Setup
 - Communicate to third partner / ads platform
 - Testing objects are limited
- Tracking
 - External data loop

Google Text Ads

- Google Ads, CPC
- Content
 - Headline
 - Display URL
 - Description
- SRP + Search Network
- Exact vs. Broad match
- Campaign Structure

Google Product Listing Ads (PLA)

- More info (price/picture) more qualified traffic
- Catch more eyeballs
- Product/Brand match
- Higher barrier, less competition
- Backend structure

A/B Testing Solution in the Text Ads

- Sampling
 - Based on the keywords
 - Stratified sampling for skewed data
- Test Setup
 - Campaign structure management
 - Test object: bidding models
- Tracking
 - Insides + outsides tracking
 - Data loop for the model

A/B testing with Big Data

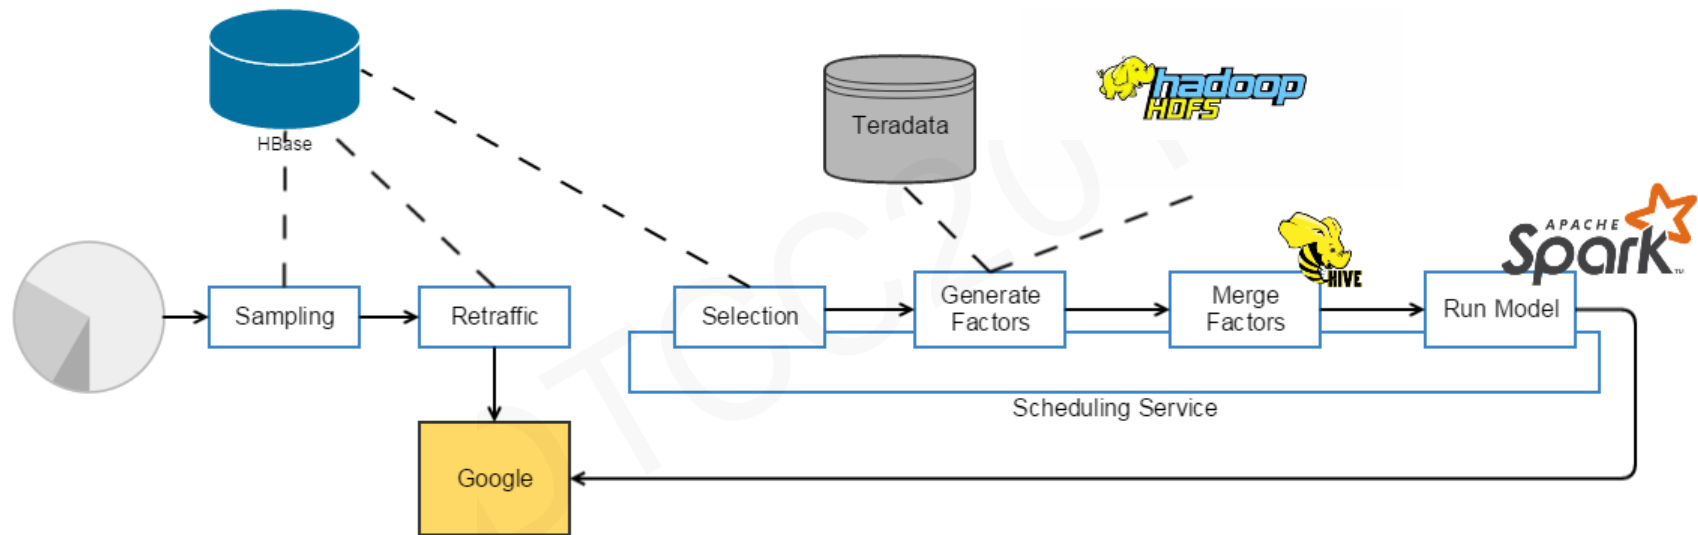

- High data volume
 - Heterogeneous data-source
 - On- and Off-line data
 - Fault tolerance
 - Value assessment
- Imbalance issue in the A/A
- Tracking with quality
 - Result assessment
 - Model input

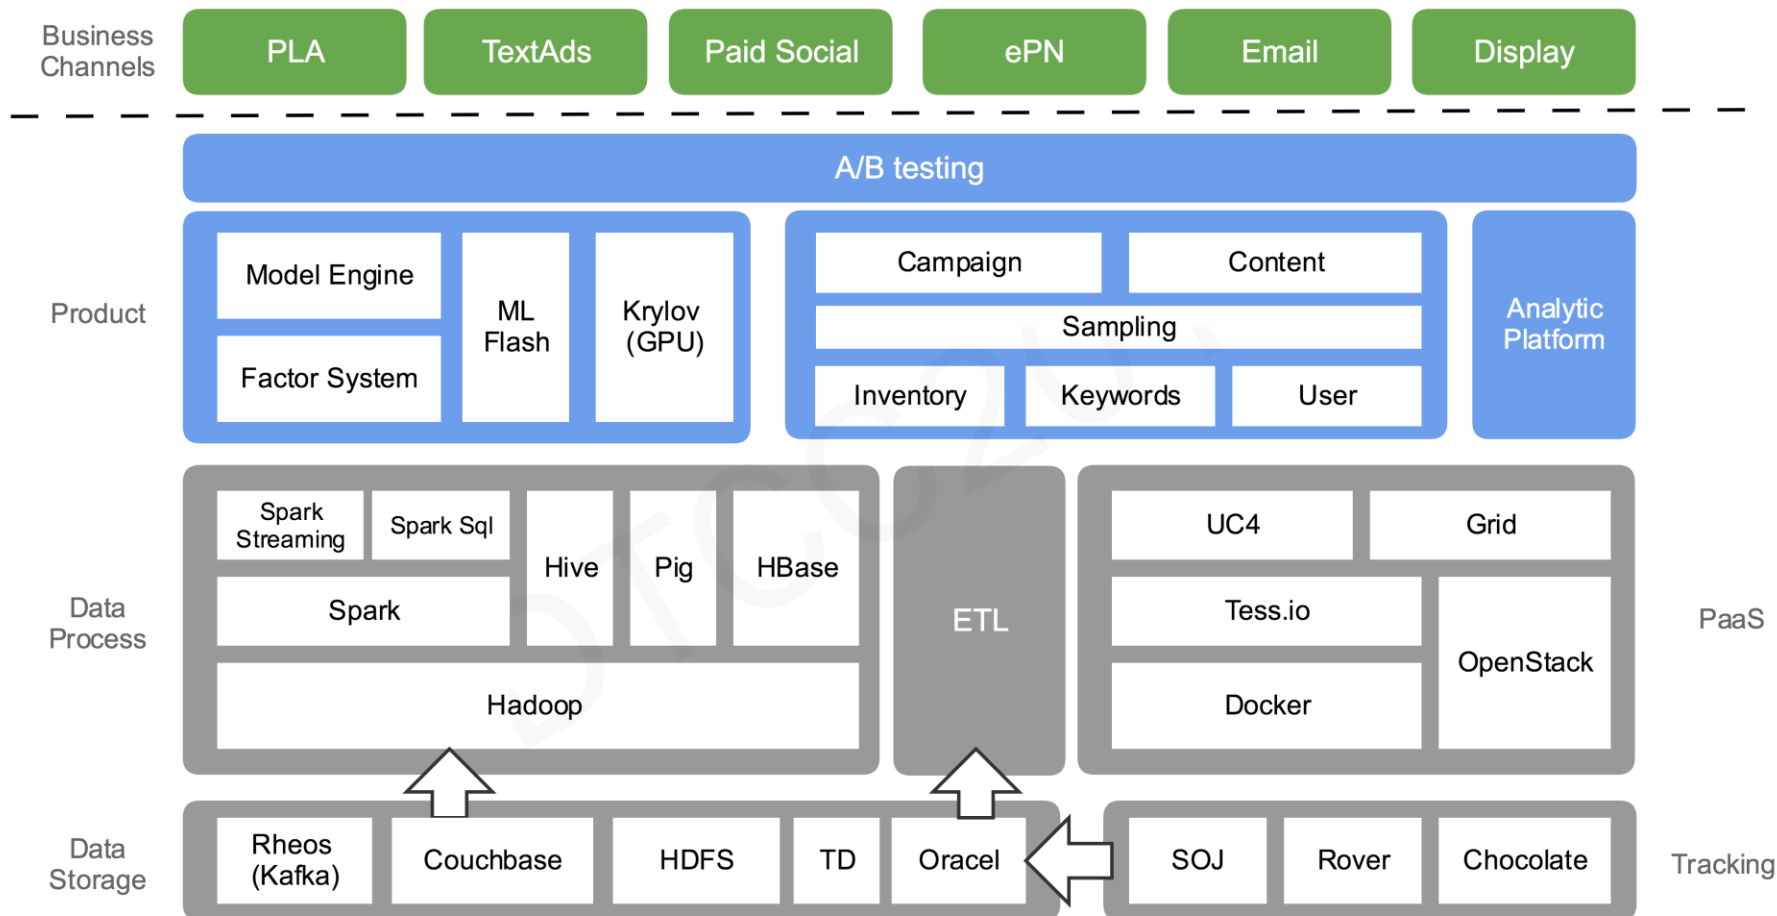

Machine Learning Model Testing

- Inconsistence between model development, testing and running
- No standard way to define, deploy and run the model
- Manual integration and heavily rely on personal experience
- Low efficiency in the model development due to lack of the production data
- Lack of model tracking and debugging
